Product description

IMPORTANT NOTE: If you see a rainbow splash screen with a lightning bolt symbol, this indicates you are NOT using B+ compatible software. **NOOBS 2.7.0 or later is required for operation of the B+.**

An exclusive kit from CanaKit that includes the fastest model of the Raspberry Pi family - the Raspberry Pi 3 Model B+ (B Plus)!

The Raspberry Pi 3 Model B+ is the latest production Raspberry Pi 3 featuring a 64-bit quad core processor running at 1.4 Ghz. It incorporates built-in WiFi and Bluetooth connectivity with enhanced dual-band 2.4 GHz and 5 GHz WiFi, Bluetooth 4.2/BLE and faster Ethernet.

To take full advantage of the improved power management on the Raspberry Pi 3 B+ and provide even support for even more powerful devices on the USB ports, a 2.5A adapter is recommended.

The power supply included in this kit incorporates a noise filter to provide the highest stability and comes with a 5-foot cable. This power supply can power the Raspberry Pi 3 B+ and other USB accessories (such as most portable hard drives) without requiring an external powered USB hub.

The kit also includes a premium quality case specially designed for the Raspberry Pi 3 B+.

Kit Includes:

- Raspberry Pi 3 Model B+ (B Plus) with 1.4GHz 64-bit quad-core ARMv8 CPU (BCM2837B0) 1 GB LPDDR2 SDRAM
- CanaKit 2.5A Micro USB Power Supply with Noise Filter (UL Listed) specially designed for the Raspberry Pi 3 B+ (5-foot cable)
- Set of 2 Aluminum Heat Sinks
- Premium Clear Case
- CanaKit Quick-Start Guide

Warranty & Support

Amazon.com Return Policy: You may return any new computer purchased from Amazon.com that is "dead on arrival," arrives in damaged condition, or is still in unopened boxes, for a full refund within 30 days of purchase. Amazon.com reserves the right to test "dead on arrival" returns and impose a customer fee equal to 15 percent of the product sales price if the customer misrepresents the condition of the product. Any returned computer that is damaged through customer misuse, is missing parts, or is in unsellable condition due to customer tampering will result in the customer being charged a higher restocking fee based on the condition of the product. Amazon.com will not accept returns of any desktop or notebook computer more than 30 days after you receive the shipment. New, used, and refurbished products purchased from Marketplace vendors are subject to the returns policy of the individual vendor.

Question: Does the "premium clear case" for pi 3 model b+ in canakit "b07bc7bmhy" contain slots for the camera ribbon cable?

votes

Answer:

There are slots along each edge of the top of the case. They appear to be there to thread the ribbons through.

Question:

Does the power cable have a switch?

Answer:

Yes, this is one of the distinguishing features of this kit. It has a cable that connects between the power supply and the Pi. The on/off switch toggles and a small red LED lights to show that power is on.

In case you hadn't noticed, ALL Raspberry Pi processor boards cost the same. Why? Because the price is fixed and controlled by the Raspberry Pi organization. I'm not complaining about this, but it does beg the question as to why you would pick one supplier over another.

The key differentiators are:

1. Power Supply - is there one and how good is it? The official power supply is designed to plug into virtually any outlet on the planet. Consequently it's huge. The one included in this kit will allow you to plug other things into a duplex or quadruple outlet (like I have in my shop).
2. Enclosure - is there one and how good is it? I like the 'official' enclosure slightly better than this one for one reason - it is a bit more modular, but this one is decent quality and may provide better ventilation than the original. Originally I thought that I couldn't install a GPIO cable and put the cover on this one, but happily discovered that there is a gap, large enough for the cable, between the top and the side of this enclosure. A RaspberryPi 'Hat' should fit ok, but I personally haven't tried that.
3. Price - as I mentioned, the Processor price is fixed, but the add-ons aren't. This kit is about the

Mole

Easiest Way to be Up and Running with Raspberry Pi

April 16, 2018

Verified Purchase **Early Reviewer Rewards** ([What's this?](#))

There are many ways and lots of places to buy what's needed to get a Raspberry Pi operational but this kit has to be one of the easiest. All necessary instructions and parts are included - just add your own keyboard, mouse and HDMI monitor. Good value too - one might be able to purchase the parts separately for less and if you want a hundred that would make sense but just to start with a Pi this is a great place to begin.

There's no point in my reviewing the Pi itself - thousands of others have done that already.

Replace your old Pi with this

July 6, 2018

Verified Purchase

I use these to teach programming classes to inspire the next generation of programmers. What can I say - these CanaKits have it all (except a memory card). 4 cores of processing power is crazy in such a low-cost board. My original Raspberry Pi has shown its age. These B+ 3rd gen units boot in ~20 seconds vs the 4 minutes from the original Pi.

The unit stood up to regular abuse: 30 Chromium tabs, 4 terminals, and compiling java code. Handles these tasks wonderfully which makes teaching programming that much easier.

I even picked up a second for myself as run RasPlex on it. Huzzah - DIY computing as its finest;

The Ultimate Retro Console!!!

September 23, 2018

Verified Purchase

What i can to say: It's perfect ^_^ . I'm gamer, a retro gamer in majority, after thinking and thinking about a classic console, i choose to do my own console, using a raspberry. As advanced computer user, it's not so hard to understand the world of raspberry. Well, ok, now about the product: This kit is all u need if u begin into raspberry world, why? have all accessories may you need after, case, heatsinks, adapters & in-line switch, u'll need a microsd as hdd to the raspberry, nothing serious. After doing some...modifications (i know i know, that fan wasn't there XD), and installing it behind a 16" hdtv, the result is a powerful retro console w/display, & maybe a desktop computer to little projects, Why not Zoidberg? If you want a little computer to enjoy other world far from windows and MAC, and a retro console at the same time, where you can play nes, snes, n64, ect ect ect....go ahead and order this kit! Enjoy guaranteed. CanaKit, thanks so much O_^ from Costa Rica.

Kenneth Farmer

Really good kit for a hobbyist.

May 26, 2018

Verified Purchase

I have been using a Pi -B and Zero until now. Didn't realize just how much more powerful the 3+ is. Almost could be used as a person's daily desktop if it had a bit more onboard ram. But, it is a great little device for programmers and experimenters. Wifi just pops up ready to use without having to

hack through the old method of driver finding and loading. (Although if your network is secured, which it should be, there is a little work to get the password into wpa_supplicant, but vastly easier than the old method of using wrappers.). If you are used to standard Debian, there are some gotchas in the Raspian desktop that will cause puzzlement for a bit, but you won't get stuck. The Raspian desktop is too Windowish - tries to tell you what you ought to do. Apt-get XFCE if you want a familiar Debian GUI.

But for a command line junky, it is great. Hack all day and if you bomb it, just flash the microsd again and boot up. With the Etcher flash utility, it takes about two minutes to get your little machine back online.
