## From the manufacturer

### Up to 2,500 Sq. Ft. of Exceptional WiFi Coverage

The Archer A7 delivers exceptional WiFi coverage throughout your home as three high-gain antennas and strong amplifiers connect every device—from the living room to the backyard.

## The WiFi Router That Fits Most Families

With more devices in homes today, you need a solid router to keep up with WiFi demands. AC1750 routers pack the speed and range most families need at an affordable price. The Archer A7 provides the best value for your dollar, delivering the perfect mix of performance and features for most homes.

## High-Speed WiFi for Your Needs

3x faster AC1750 WiFi ensures a smooth gaming and 4K streaming experience. Dual band WiFi supports more devices with less disruptions.

## Secure WiFi for Your Family

Keep your family safe and devices secure with advanced WPA/WPA2 wireless encryption, parental controls and guest access.

## Alexa and IFTTT Compatible

Turn on the guest WiFi with Alexa voice control and use IFTTT to trigger actions when devices connect or disconnect from your network.

## Easy Setup and Management

With the simple and intuitive Tether app, you can set up your router in minutes, manage your WiFi at home or check in remotely through the cloud.

Warranty & Support

Amazon.com Return Policy: You may return any new computer purchased from Amazon.com that is "dead on arrival," arrives in damaged condition, or is still in unopened boxes, for a full refund within 30 days of purchase. Amazon.com reserves the right to test "dead on arrival" returns and impose a customer fee equal to 15 percent of the product sales price if the customer misrepresents the condition of the product. Any returned computer that is damaged through customer misuse, is missing parts, or is in unsellable condition due to customer tampering will result in the customer being charged a higher restocking fee based on the condition of the product. Amazon.com will not accept returns of any desktop or notebook computer more than 30 days after you receive the shipment. New, used, and refurbished products purchased from Marketplace vendors are subject to the returns policy of the individual vendor.

Manufacturer's warranty can be requested from customer service. [Click here](#) to make a request to customer service.

**Happy So Far**  
July 15, 2018  
Model: AC1750 **Verified Purchase**

I have Mediacom 200 Mbps service. Setup was fast and easy. Connected to three smart TV's, two Home Theater Receivers and three desktop PC's without issue. One PC is wired direct through the LAN port I get 240-255 Mbps. My second PC is at the opposite end of my 1740 sq/ft house from the router and I use a TP-Link Archer T4UH adapter I get 170-180 Mbps download speed. My third PC is only about 25 feet away using a Belkin model F9L1109v1 adapter I get 142-145 Mbps download speed: I also tried a Netgear AC1200 adapter model A6210 that gets about 120 Mbps on this PC. My point is the wireless adapter you use will make a difference. This router is on most top 10 lists for 2018 and cost a lot less than the others on those lists. I am happy with the performance so far. I just hope it lasts longer than the last TP-Link router I purchased.

**5 GHZ Antenna Will Not Stay Connected**  
September 3, 2018  
Model: AC1750 **Verified Purchase**

This is the US v5.0 of the TP-Link Archer C7 (AC1750). There is only one version of the firmware from

April 2018. The DD-WRT site states that v5.0 is not supported and "probably never will be". Regardless, the 5ghz antenna refuses to stay connected and recycles constantly. There is no problem with the 2.4ghz but having a dual band router with only one working set of antennas is completely unacceptable. I have v2.0 of the router running with DD-WRT and the 5ghz antenna works perfectly. I have to assume that TP-Link has deficient firmware for this router. The inability to upgrade to a newer native firmware from TP-Link, or to flash it with DD-WRT makes it unusable for someone like myself who utilizes the 5ghz band. Unfortunately, there's no way to tell what version hardware you're ordering. DD-WRT does support up to v4.0.

#### Oh Boy....That was rough

August 2, 2018

Model: AC1750 **Verified Purchase**

After getting the router setup I had the hardest time getting access to the Net. The password didn't work at first and my PC couldn't connect.

Half the problem was my fault. I wanted a dual network and simply misconnect the PC. Once that was done I still had issues with the router. I had Wi-Fi signal but couldn't connect. After reaching to TP-Link, which didn't get back with me, I searched online and figured out that I had to go to the router link ( <http://tplinkwifi.net> ) to gain total access. After this was achieved I was able to setup passwords and instantly my PC was connected to the NET. I'm not tech savvy and the instructions were vague but I am happy with this router. My other router is the TP-Link Touch which I truly love.

#### TECH NOTE:

For those who are not tech savvy just remember to have all your connected devices off..including the modem. Once you have made the correct connections plug in the router and wait for all lights to come on then plug in the router and wait for all lights to come on especially the internet light, then lastly turn on all device that you have connected to your router.

#### Failed to maintain a consistent internet connection.

September 8, 2018

Model: AC1750 **Verified Purchase**

I generally don't write reviews. I am mostly happy with the product I receive, which is what I expect to happen. But when I have a problem, I report it. This router failed to live up to it's promises. After configured, which was easy, the router failed to maintain a consistent internet connection. At first, I would get the promised 200+ mps from Spectrum in the 5G wireless connection but after a couple of hours the speed coming out of the router in both the wired and wireless connections would drop. At first I would notice that I would get buffering in YouTube TV or Amazon prime and eventually I was forced to reboot to get any internet connection to work. I tested this scenario many times. Several times I swapped back in the old TP-Link router I had, to see if I had a router problem or a Spectrum problem and each time the old router was hooked up, I had no problem after two days of use. Therefore, I conclude that the new router is defective and I am returning it. I am replacing it with the NETGEAR R6700 Nighthawk AC1750 which admittedly costs a little more but hopefully will come 100% ready to work out-of-the-box.

I would like to point out that I tried to apply the latest firmware to the new TP-Link router but I could not figure out how to apply a new version to this router. I don't believe TP-Link provides an easy way to update the router software.

#### Best out-of-the-box experience!

August 21, 2018

Model: AC1750 **Verified Purchase**

The router arrived while I was at work, so my teenage son transferred all the cables from the old router to the new one, configured the password, and everything worked perfectly without any advanced config. Our network printer connected flawlessly to the router, and I then reconfigured the printer on 3 computers running Windows 10. It has never been so easy to set up that printer. Much easier than my old Netgear router ever was.

#### Best Interface & Features

September 28, 2018

Model: AC1750 **Verified Purchase**

Gigabit confirmed. After a much troubleshooting, I'm getting full 950mb+ speed thru Ethernet on the Router. Sadly Gigabit is too advanced & nothing supports gigabit wifi yet so there's no way to test wifi speeds. It's future proof I guess.

My iPhone maxes out at 250mb & I hit that easy. The UI & LED night time settings are worth a try. ZERO latency on PS4. Instant HD streaming.

4 stars cuz there's no way to test the wifi.

Crazy legs

#### Good Value

September 3, 2018

Model: AC1750 **Verified Purchase**

I installed several smart devices with different aps in my condo and became concerned I may open my network to hacking. Replaced my old router with a built in modem with this TP-Link AC1750 and a TP-link Modem. After reading some of the reviews I had real concerns about failing on the installation. The installation of both were easy and I was able to get all of my devices back on wifi quickly. I installed all of the smart home devices on the guest band keeping them out of my network. Everything is working better than I expected.

#### Great product

September 18, 2018

Model: AC1750 **Verified Purchase**

This is a replacement for a 15 year old router I had but it works beautifully. If I would have known that it would work this good I would have bought it a long time ago. Covers the entire apartment all the way to the street and parking lot. Says to can handle 50 devices so I am not sure about that but I do know at least 12 devices it can support. No drop signal or dead spots. Fast deliver to.
